PUBLICATION OF THE PATENT OFFICE

INTRODUCTION

In view of the recent amendment made in the Patents Act, 1970 by the Patents (Amendment) Act, 2005 effective from 01st January 2005, the Official Journal of The Patent Office is required to be published under the Statute. This Journal is being published on weekly basis on every Friday covering the various proceedings on Patents as required according to the provision of Section 145 of the Patents Act 1970. All the enquiries on this Official Journal and other information as required by the public should be addressed to the Controller General of Patents, Designs & Trade Marks. Suggestions and comments are requested from all quarters so that the content can be enriched.

(57) Abstract :

It is a multitasking Natural Language Processing (NLP) system that is capable of the automated analysis of Indian legal documents. The legal texts usually consist of highly complicated and context-sensitive judgments, statutes, and contracts, which make a manual review slow and error-prone. The traditional methods that are primarily based on keywords improve the fetching of results only, but they fail to understand the text in its context and consequently, lead to the waste of time and even privacy breaches. To handle these issues, the invention marries the three core components—Named Entity Recognition (NER), Summarization, and Anonymization—so that the whole is a single transformer-based model with shared parameters. The system has been trained and tested on a dataset of the Indian Supreme Court judgments which is available in the open-access, collected from both Indian Kanoon and the official Supreme Court of India portal, and covers records from 1950 onwards. The NER module detects and assigns the correct category to the legal entities, e.g., case citations, statutes, judicial authorities, petitioners, and respondents. The Summarization module provides relevant, concise, and lucid summaries of the first long judgments while still being able to trace the original legal arguments. The Anonymization module operates on the principle of rule-based substitution that automatically masks PII and other sensitive information without making the text unreadable or less readable. Moreover, the invention has also been made available as a mobile app which is a user interface, turning the user into a legal document uploader, who can process them automatically and access entity recognition, summaries, and anonymized versions securely and in real time. The invention that is equipped with domain-specific training, privacy protection, and mobile accessibility has an easy and efficient solution for case law retrieval, compliance audits, and legal research modernization in the Indian judicial system, thus making it scalable.
